Certified Data Erasure for Apple Watches

Secure. Efficient. Compliant.

WatchWipe is Blackbelt360's specialised solution for the secure and certified data erasure of Apple Watches. Designed to meet the stringent demands of retailers, marketplaces, and supply chain services, WatchWipe ensures that sensitive data is permanently removed, facilitating the safe resale or recycling of Apple Watch devices.

Key Features:

- **Tailored for Apple Watches:** Specifically engineered to handle the unique architecture of Apple Watches from Series 7 through Ultra 2, ensuring thorough data sanitisation every time.
- **Certified Compliance:** Adheres to international data protection standards, including CCPA, EU-GDPR, SOX, GLBA, HIPAA, ISO 27001, NIST SP 800-88, and DoD 5220.22-M.
- **Comprehensive Audit Trails:** Generates detailed reports for each device, documenting the erasure method, date, and device identifiers, providing transparency and accountability.
- **User-Friendly Interface:** Simplifies the data erasure process with an intuitive interface, reducing complexity and increasing operational efficiency.
- **Advanced Wipe Settings:** Offers customisable settings to specify the number of overwrite cycles, exceeding established data erasure standards to ensure data is unrecoverable.
- **Device Reset Verification:** Post-erasure, WatchWipe performs a reset check to confirm the device is restored to factory settings, ensuring any residual data has been completely eliminated.
- **Component and Cloud Status Checks:** Detects original and replacement parts, and performs comprehensive checks on carrier, lease, warranty, and lock status, ensuring each device's integrity and readiness for resale.
- **Note:** WatchWipe requires macOS and additional hardware to operate. Blackbelt360 works closely with trusted hardware suppliers and can guide you on sourcing and setting up the required equipment for optimal performance.

Certified Erasure with Globally Recognized Compliance:

Blackbelt360's WatchWipe helps retailers, marketplaces, and supply chain services, to comply with stringent international standards such as CCPA, EU-GDPR, SOX, GLBA, HIPAA, ISO 27001, and the rigorous US NIST Special Publication 800-88 and US DoD 5220.22-M. These certifications confirm that WatchWipe meets the highest standards for data sanitization.

Blackbelt360 uses proprietary methods tailored to each operating system. Every WatchWipe session delivers the following features and benefits:

Erasing Apple Watch Data: The software efficiently erases data from Apple Watches, ensuring that all sensitive information is permanently removed. This safeguard protects customer data and supports cost-effective management by avoiding the need for device destruction or re-procurement.

Wipe Settings and Standards: WatchWipe's advanced settings allow users to specify the number of wipes, adhering to and exceeding established data erasure standards. This flexibility ensures that all data is securely overwritten and unrecoverable.

iOS Data Erasure Processes: **Secure Wipe:** Overwrites the existing iOS with a new ISPW file, ensuring the device is factory reset and reboots to the "hello" screen, making recovery impossible. **Standard Wipe:** Uses the device's built-in factory reset function, ensuring a straightforward wipe that also resets the device to the "hello" screen.

Transparent Auditing: Offers a comprehensive audit trail for each device, detailing the wiping method, date, and device identity.

Device Reset Check: After the wiping process, a device reset check is performed to ensure that the device is in a factory-reset state, effectively eliminating any chances of data remnants or recovery.

Replacement Parts and Cloud Checks: Our WatchWipe software detects original parts and replacement parts and performs comprehensive cloud checks, including carrier, lease, warranty, and lock status, ensuring a thorough assessment of each device's condition and security status.
